

DOMINATING GLOBAL MARKETS - THE NEW GOAL POST OF SPARTAN

Dr. Vikram Mehta,
Managing Director
Spartan Engineering Industries Pvt Ltd

Spartan had a good turnout at the bauma conexpo. The exhibition was a great opportunity for showcasing the company's products. While the company participates in many exhibitions in the southern region, they consider Bauma Conexpo to be one of the better exhibitions in the northern sector.

Spartan has launched several new products at the exhibition. One of the products is a fire evacuation lift,

which is used to rescue people during a fire in a building. This lift has been made mandatory in Maharashtra and is likely to be made mandatory in other states soon. This new product is being showcased to existing developers and customers to promote its life-saving features, especially as buildings are becoming taller. Additionally, Spartan has launched a new product used for pouring concrete and an upgraded version of their already best-selling lift technology. The upgraded product features a new structural design, anti-skid and anti-vibration flooring, and advanced IoT features with biometric sensors for authorized personnel to use the lift.

The infrastructure industry in India is looking at significant growth in the coming years, and under the Vision & Mission 2022-2030, Spartan is aiming to expand globally and sell in more than 25 countries. With their recent office openings in Dubai, Saudi Arabia, and Africa, Spartan plans to dominate the global market in the next five years. Spartan's innovation and design team constantly develop new products and technologies, which sets them apart from their competitors. In the last year, Spartan earned a revenue of 110 crores, and they are already on the way to touching 175 crores this year. ■
